course: COMP6210 week: 02 lesson: "02A" topic: HTML-CSS-Revision
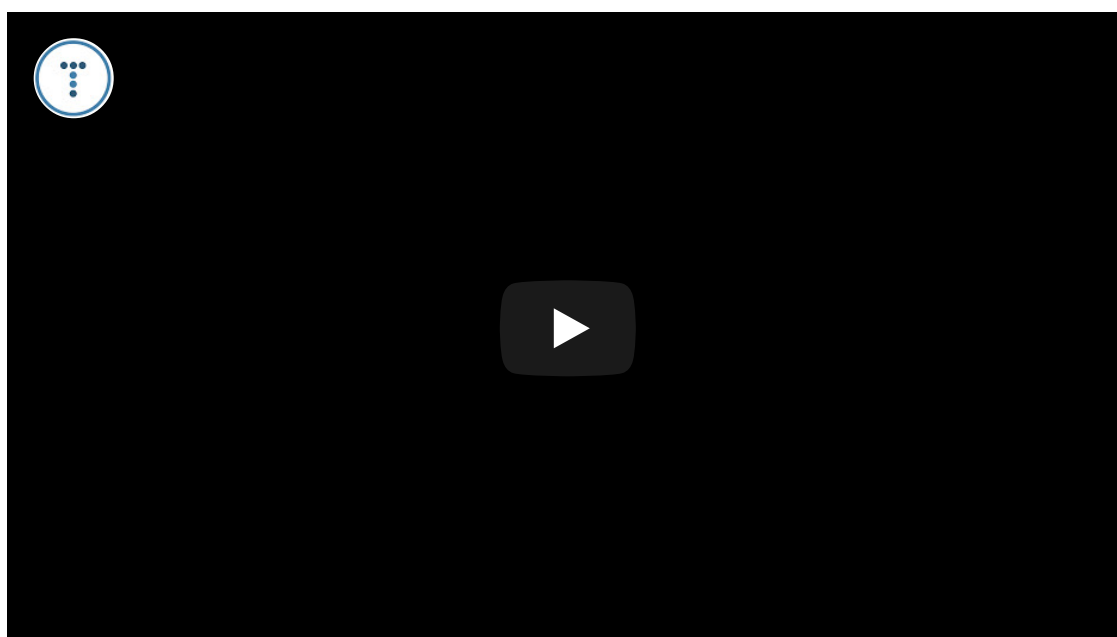

Revision

Previously you have learned HTML and CSS and a little bit of JavaScript.
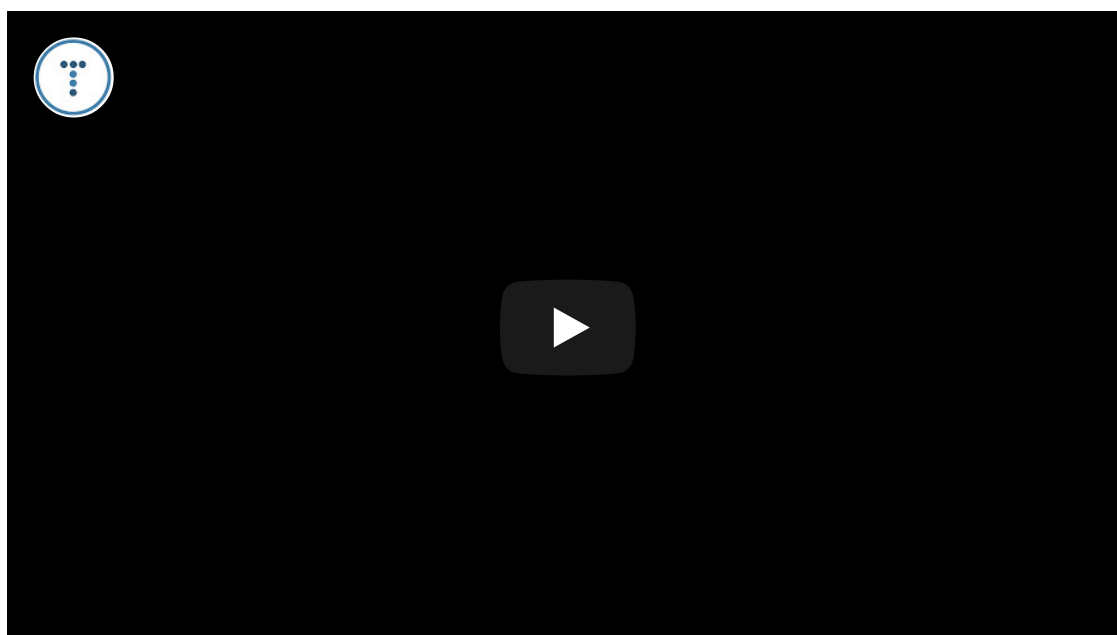

In this session we are going to have little revision to help you along the way for the first assessment where you will be given the task to create HTML and CSS templates.

First of if you don't know any HTML or CSS - or you have forgotten it all, watch these videos:

HTML Crash Course

CSS Crash Course

In class demo

In class we are going to build a simple website that uses HTML5 semantic tags and CSS grid.

We will also make use of a framework, so you can leverage some UI components.

Note the code for this demo does directly require "web server" but it will be best to set it up and used to using the right practice.

Assignment Preperation

Work on your assessment, based on what you have learned in the previous session.

By know you should have read through the case studies and selected the one you want to use for your project.

Your task for this class is to setup a list of all the things you have to do for assignment.

In the assessment you will find some key things that you must complete, but there are also things you need to do so that you can accomplish those things.

Make an exhaustive todo list and break them up in a weekly sections so you can discuss them with your tutor each week.
